1 UPDATES

1.1 Missed Activities Management

PixSell can now be configured to allow users to better manage their missed activities. When starting and closing activities, a message can be shown to users to let them know they have missed activities in a given time period, so that they can re-plan them. The wording of the message can be changed if needed. Alternatively, we can also configure PixSell to block users from starting new activities until they've re-planned or deleted all their missed activities within that time period.

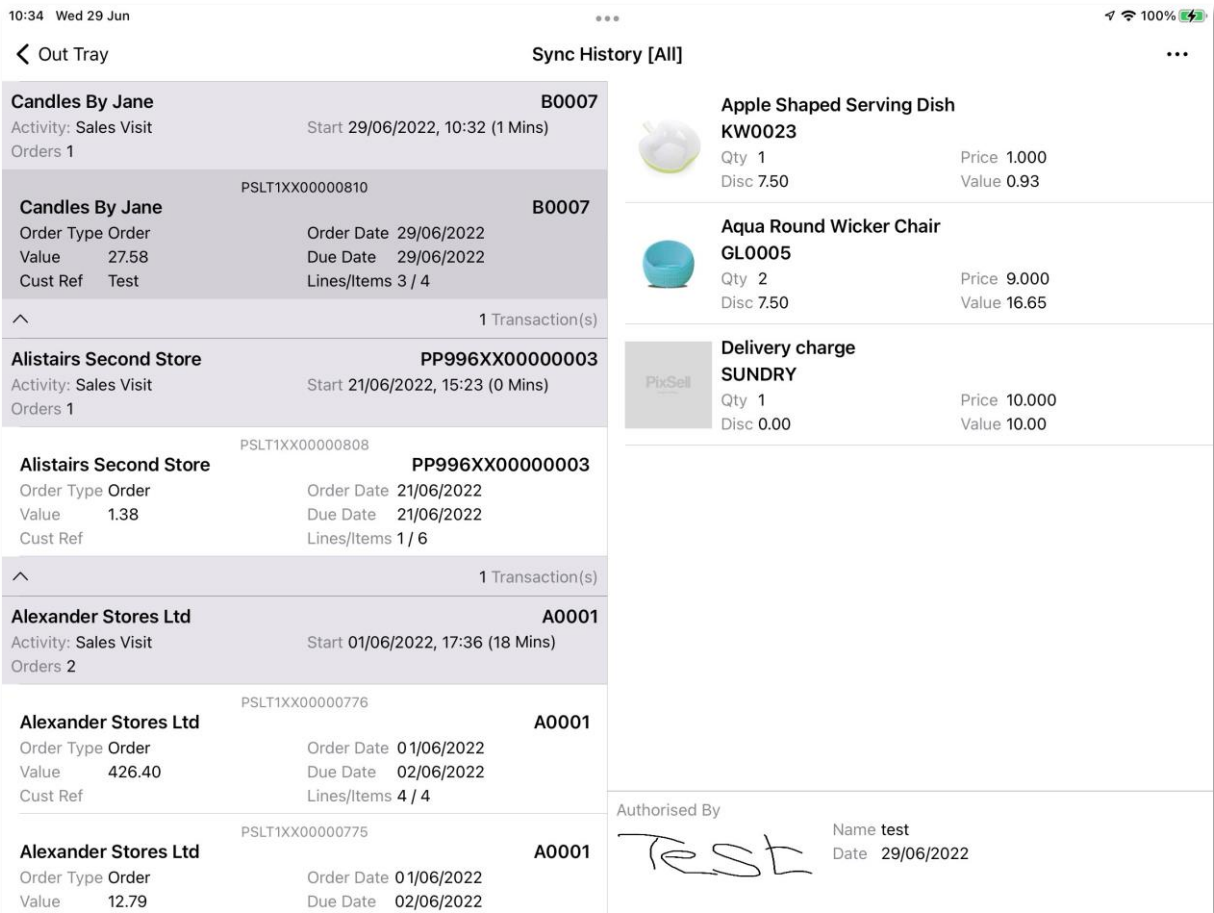

Description	Comment
Type	New feature
Other data	No further data is required
Deployment	This feature requires a change to your configuration

1.2 Increase in Sync History

The Out Tray's Sync History is now retained for 35 days by default, instead of 7 days.

Description	Comment
Type	Improvement to existing feature
Other data	No further data is required
Deployment	This is available to everyone

1.3 Other Improvements

- Improvements to the syncing process.
- Tapping the 'Active Customer' in the PixSell menu will now show the Customer Dashboard panels for all users who have this data, regardless of their configuration.
- When trying to use the device's camera to scan barcodes, when in side-by-side view with another app, PixSell will now show a message to explain the camera is only available in full screen view.
- The shopping trolley icon in the Product List (which showed where Also Bought items were available against a product) has now been removed due to feedback that this icon was confusing. Now, as per the Product List's chain button, a chain icon will show against products which have Also Bought items and/or Associated/Linked products.
- It is now possible to configure PixSell so that zero value carriage lines are not added to orders, as it could cause problems for some customers.

1.4 Bug Fixes

- Tiles were on occasion appearing/disappearing from the presentation screen when expanding/collapsing other tiles.
- Fixed possible crashes in the app in certain scenarios.
- The Media Summary 'Filter By' menu did not stay up once opened.
- The Running Total could be incorrect when switching between concurrent orders in the Catalogue.
- Plan Re-Order images were sometimes showing the edges of the previous replacement products behind the newly added pocket's product image.
- When discount reasons are enabled, if managing lines and entering a discount against multiple lines at once, the same message would be shown multiple times for each line to say a reason was not entered, and if not entering a reason the order would complete without the discount. To avoid this, a reason box will now show beneath the discount box, and be applied to all selected lines. It can then be manually amended on each line if different lines require different reasons.
- Some 50/50 side-by-side views were not displayed correctly on larger 12.9" iPad models.
- The O/S Products report crashed when trying to display it in compact size.
- The final discount pop-ups were not showing for Credits.
- A product's Due Date in its Order History was showing as today's date when it was not populated.
- With certain configurations, the quantity could reset itself when changing the price list.
- Tagging or un-tagging could cause the screen to flicker in the Catalogue and Product List.
- Fixed some input localisation issues with commas in figures in the transaction keypad.

2 UPDATE HISTORY

Summary of features and changes included in recent PixSell 3 releases:

Version	Release date	Summary

3 BEFORE YOU UPGRADE

3.1 Note to PixSell 3 administrators

Whilst we make every effort to thoroughly test each new release, there is always scope that upgrading without testing may have an adverse impact on your business processes.

Our advice is that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

3.2 Testing advice & best practice

- i) Please disable the automatic update of Apps from the App Store on all devices using the PixSell 3 application in a live environment.
- ii) We would recommend that any new release is thoroughly tested before rolling out all devices by processing examples transactions that confirm to your most common workflows – for example:

Upgrade a single device and process a transaction that applies:

- Line discounts
- Order discounts
- Suggested orders
- Duplicate orders
- Promotions
- Multi-language/Multi-currency variants
- Planned re-orders and In-store counts

If you have any queries, or require any further information, please contact Aspin support.
