## PX **PixSell** Activity module factsheet

The activity module enables the PixSell user to schedule and maintain sales activities within the PixSell app against customer accounts. The resulting data can then be viewed via the browser based PixSell reporting system.

Utilising the Activities module enables reps/agents to plan and perform a number of activities against an account, record notes and schedule visits, whilst historical, current and future activities can be viewed by head office on the online reporting site.

## **Benefits for reps**

- Schedule all forward calls within PixSell no need for additional diaries
- View scheduled appointments by day, week and month
- Set objectives against each call
- Record notes against sales call for reference and head office reporting
- Be prompted to book next call in line with call cycle

## **Benefits for managers**

- Great visibility and control over sales rep movements and sales calls
- Access planned, missed and scheduled calls by rep within the app
- Review and download rep activity via online reporting suite
- View actual start and end times and tracked GPS location for each sales call
- Export head office dictated journey plan down to reps' iPads
