1 UPDATES

1.1 New options in the customers' Advanced Filters for invoices and credits

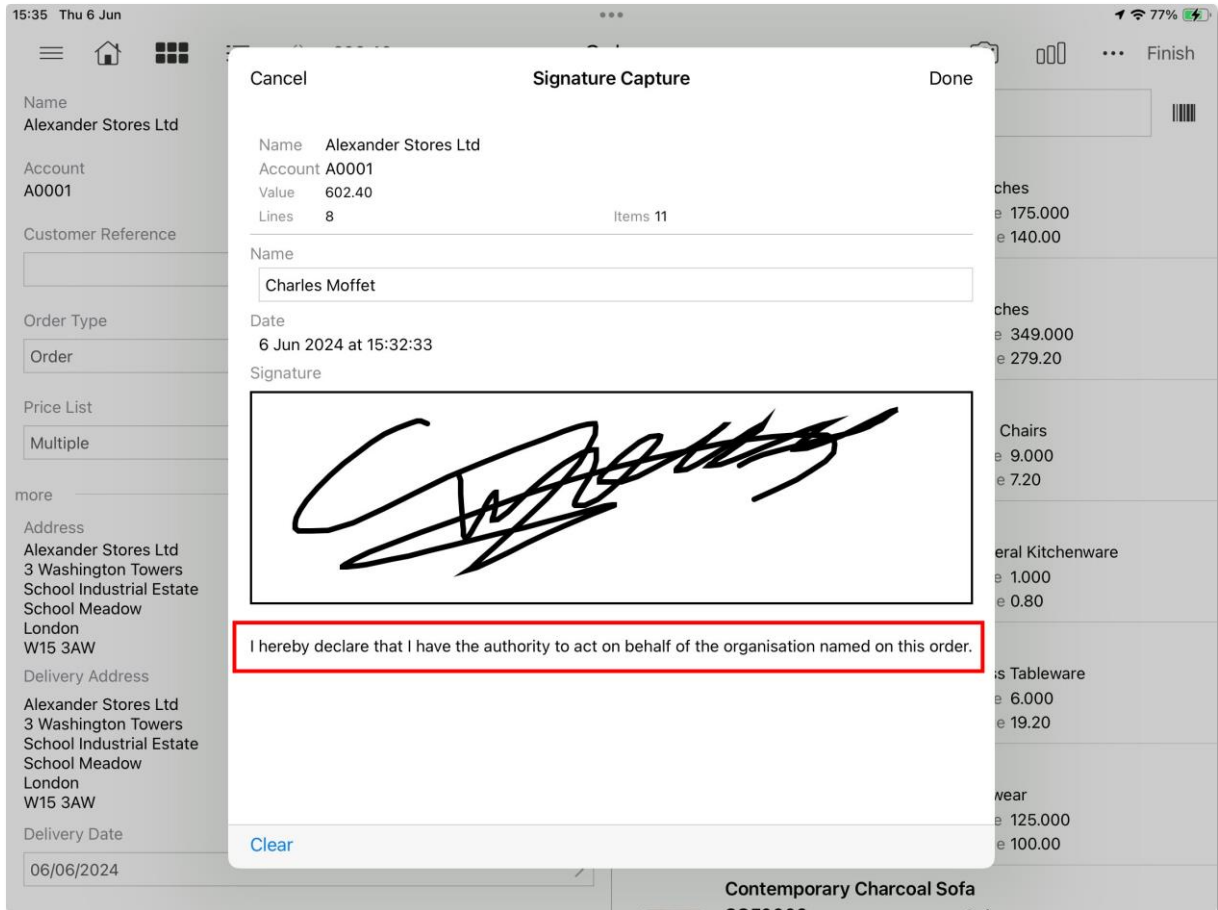

The customer's Advanced Filters can be used to see which customers have (or haven't) placed an order within a given time period, or which customers have (or haven't) ordered specific product(s) or group(s). This was based on order history. We've now added options so the same can be done for invoices and credits, based on the sales history.

Description	Comment
Type	New feature
Other data	Requires sales history to be sent (invoices = type 1, credits = type 2)
Deployment	This is available to everyone

1.2 Information text shown beneath the transaction Signature Capture box

The text “I hereby declare that I have the authority to act on behalf of the organisation named on this order” will now show below the signature box. Note that this can be amended or removed altogether, if you would like to do so please contact the Aspin Service Desk (contact details on the last page of this document).

Description	Comment
Type	Improvement
Other data	No new data required
Deployment	This is available to everyone

1.3 Other Improvements

- The file names of CSV confirmation documents exported from the Out Tray can now be changed.
- When displaying the order's running total in the catalogue, the search box will now be narrower so that the running total remains visible when searching for products.

1.4 Bug Fixes

- Fixed various display issues with Image Overlay badges.
- Re-added the blue magnifying glass icon to hide the catalogue's search box, as once opened it could no longer easily be dismissed.
- The product list was sometimes jumping back to the top when switching from the catalogue. The catalogue and product list will now remain in the same positions when switching between the two screens.

2 UPDATE HISTORY

Summary of features and changes included in recent PixSell 3 releases:

Version	Release date	Summary

3 BEFORE YOU UPGRADE

3.1 Why upgrade?

Keeping PixSell up-to-date is crucial for several reasons:

- Our updates often include important security patches that protect against new vulnerabilities and threats. By staying current, the risk of malware, hacking, or data breaches is reduced.
- PixSell updates typically introduce new features, improvements, and bug fixes that enhance usability and performance. Outdated versions of PixSell may experience compatibility issues with newer operating systems or devices, leading to crashes or malfunctions.
- Our developers frequently optimise apps for speed and efficiency through updates, ensuring a smoother and more enjoyable user experience.

Therefore, regularly updating mobile apps is essential for maintaining security, functionality, and overall user satisfaction.

3.2 Supported devices

At present, in order to receive updates for PixSell 3, the user devices must be on iOS 15.5 or above.

In the future we plan to move this to iOS 16.0. In doing so, any user on an iPad Air 2 or iPad Mini 4 will continue to be able to use PixSell but will cease to receive updates.

3.3 Testing advice for PixSell administrators

Whilst we make every effort to thoroughly test each new release, there is always scope that upgrading without testing may have an adverse impact on your particular business processes. Our advice is therefore that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

As best practice, we therefore recommend that you disable the automatic update of apps from the App Store on all devices using the PixSell 3 application in a live environment, and that you ensure that any new release is thoroughly tested before rolling out all devices by processing example transactions that conform to your most common workflows.

For example, upgrade a single device and process a transaction that applies:

- Line and order discounts
- Promotions
- Multi-language/currency variants
- Planned re-orders, Credits, or In-store counts
