1 UPDATES

1.1 'Request Catalogue PDF' feature available in more places

You can now use this feature from the action menus of the following additional screens:

- Out Tray
- Sync History
- Customer Order History & Sales History
- Territory Dashboard Order History & Sales History

Description	Comment
Type	New feature
Other data	Requires SkooCloud PIM templates to be setup
Deployment	This is available to users of SkooCloud Plus and Enterprise

1.2 Other Improvements

- A new Quotes module is currently in development.
- The customer dashboard panel will now show the Activities panel option to all users who have the ability to long press a panel to change the displayed report.
- An option can be added to a transaction header to say whether the preferred keypad quantity should be the minimum multiple or the alternative minimum multiple.

1.3 Bug Fixes

- When multiple orders are open for different customers, the products' Order History and other related options (such as 'Also Bought' and 'Unfulfilled Items') will now be for the customer of the current order, rather than for the selected customer.
- Fixed a performance issue that could affect some customers' catalogue in horizontal paging view.
- Overlay badges data failed to show for some fields.
- The 'Email CSV + Confirmation' option was missing when viewing PDF confirmations from the Activity screen rather than from the Out Tray.

2 UPDATE HISTORY

3 BEFORE YOU UPGRADE

3.1 Why upgrade?

Keeping PixSell up-to-date is crucial for several reasons:

- Our updates often include important security patches that protect against new vulnerabilities and threats. By staying current, the risk of malware, hacking, or data breaches is reduced.
- PixSell updates typically introduce new features, improvements, and bug fixes that enhance usability and performance. Outdated versions of PixSell may experience compatibility issues with newer operating systems or devices, leading to crashes or malfunctions.
- Our developers frequently optimise apps for speed and efficiency through updates, ensuring a smoother and more enjoyable user experience.

Therefore, regularly updating mobile apps is essential for maintaining security, functionality, and overall user satisfaction.

3.2 Supported devices

At present, in order to receive updates for PixSell 3, the user devices must be on iOS 15.5 or above.

In the future we plan to move this to iOS 16.0. In doing so, any user on an iPad Air 2 or iPad Mini 4 will continue to be able to use PixSell but will cease to receive updates.

3.3 Testing advice for PixSell administrators

Whilst we make every effort to thoroughly test each new release, there is always scope that upgrading without testing may have an adverse impact on your particular business processes. Our advice is therefore that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

As best practice, we therefore recommend that you disable the automatic update of apps from the App Store on all devices using the PixSell 3 application in a live environment, and that you ensure that any new release is thoroughly tested before rolling out all devices by processing example transactions that conform to your most common workflows.

For example, upgrade a single device and process a transaction that applies:

- Line and order discounts
- Promotions
- Multi-language/currency variants
- Planned re-orders, Credits, or In-store counts
