1 UPDATES

1.1 Delivery date on simultaneous order tabs

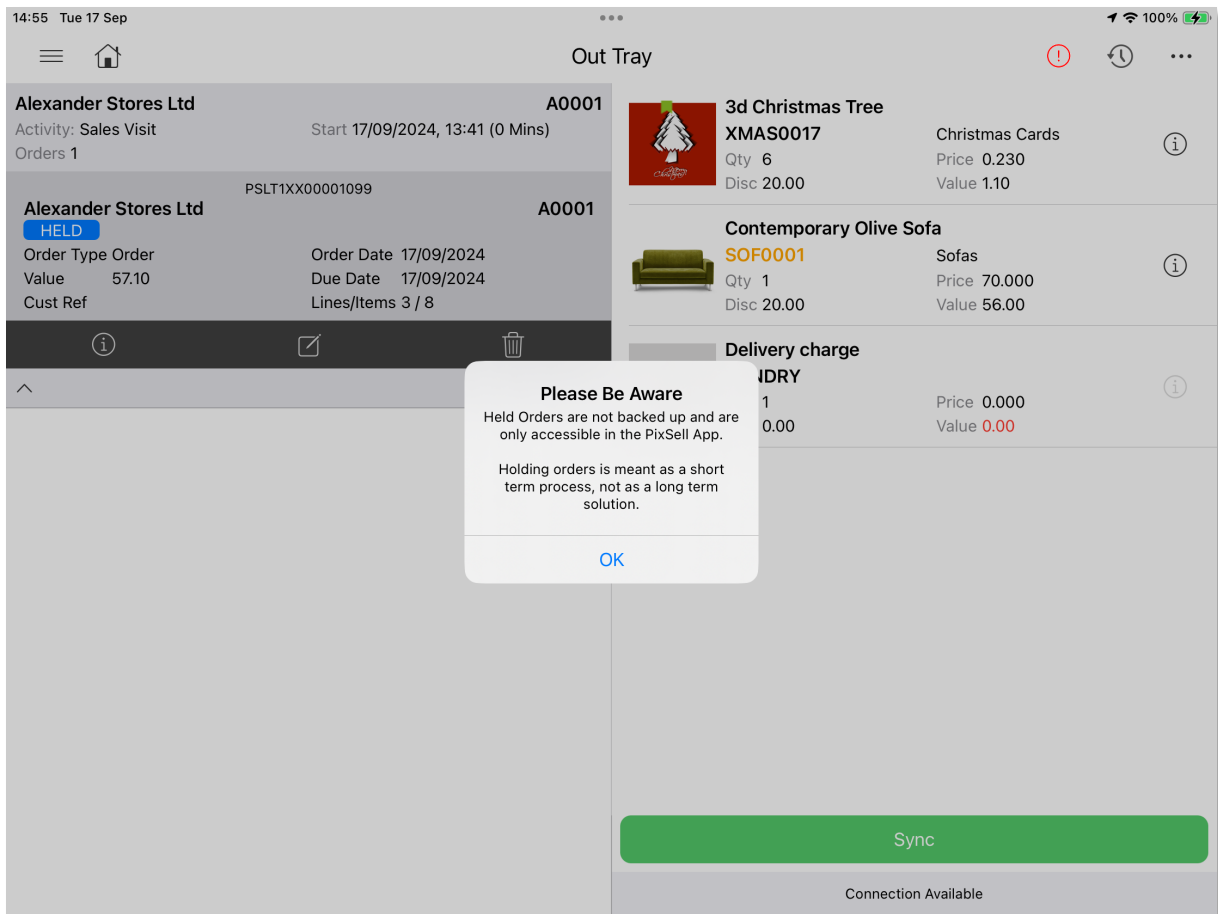

The delivery date can now be displayed on simultaneous order tabs, to more easily differentiate between concurrent orders for the same customer.

Description	Comment
Type	New feature
Other data	No new data required
Deployment	This is available for everyone, but would require a small configuration change

1.2 Held orders warning

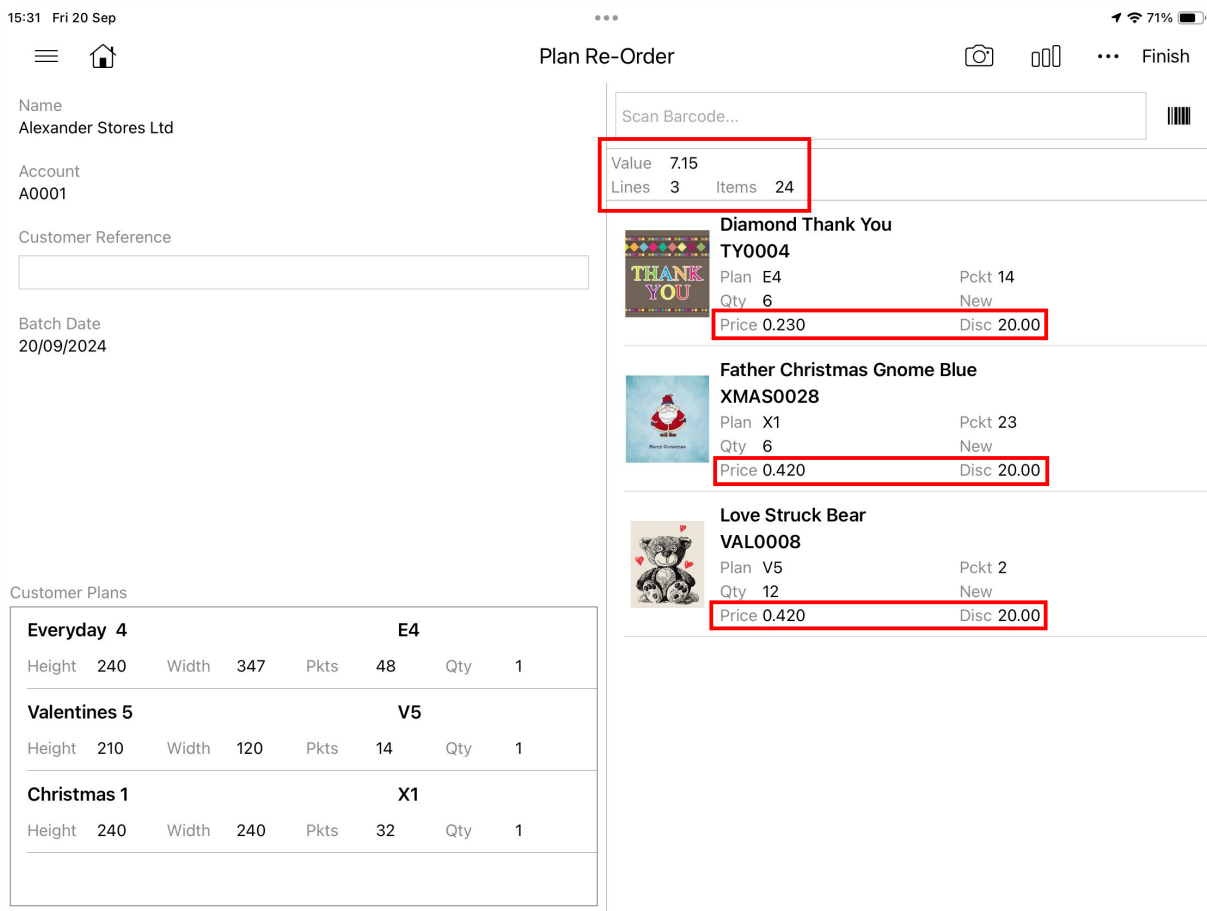

A warning will be shown in the Out Tray when holding orders, to clarify these are only kept on device and not backed up. The red exclamation mark button in the top right of the screen can be tapped to view the warning message again. The button will only show when held orders are present in the Out Tray.

Description	Comment
Type	Improvement
Other data	No new data required
Deployment	This is available for everyone

1.3 Valuation for Plan Re-Orders

Valuation can now be displayed on Plan Re-Orders. When this new feature is configured, a transaction summary will show the total value, number of lines, and number of items. Each line will also display the price and discount, both on the Plan Re-Order screen, and in the Out Tray.

Description	Comment
Type	New feature
Other data	No new data required
Deployment	This is available for users of the Plan Re-Order module, and would require a small configuration change

1.4 Other Improvements

- Error handling of blank spaces in data to avoid empty overlay badges from showing.
- Removed the banners to inform of the new activity module changes, now that it has been released for a few months. The video guide can still be viewed in the 'Tips & Tricks Videos' section of the 'Tell me more' page.

1.5 Bug Fixes

- Quantity Break pricing display corrected.
- Addressed possible crashes.
- Fixed minor display issues when viewing the single product page in portrait.
- Resolved a couple of issues that could sometimes occur in the transaction keypad.
- Fixed an issue that lead to some types of product badges to disappear when the products were tapped.
- Fixed an issue which prevented an out-of-stock product from being added to an order when it was discounted by 100%.

2 UPDATE HISTORY

Summary of features and changes included in recent PixSell 3 releases:

3.34	January 2024	Bug fixes and maintenance.

3 BEFORE YOU UPGRADE

3.1 Why upgrade?

Keeping PixSell up-to-date is crucial for several reasons:

- Our updates often include important security patches that protect against new vulnerabilities and threats. By staying current, the risk of malware, hacking, or data breaches is reduced.
- PixSell updates typically introduce new features, improvements, and bug fixes that enhance usability and performance. Outdated versions of PixSell may experience compatibility issues with newer operating systems or devices, leading to crashes or malfunctions.
- Our developers frequently optimise apps for speed and efficiency through updates, ensuring a smoother and more enjoyable user experience.

Therefore, regularly updating mobile apps is essential for maintaining security, functionality, and overall user satisfaction.

3.2 Supported devices

At present, in order to receive updates for PixSell 3, the user devices must be on iOS 15.5 or above.

In the future we plan to move this to iOS 16.0. In doing so, any user on an iPad Air 2 or iPad Mini 4 will continue to be able to use PixSell but will cease to receive updates.

3.3 Testing advice for PixSell administrators

Whilst we make every effort to thoroughly test each new release, there is always scope that upgrading without testing may have an adverse impact on your particular business processes. Our advice is therefore that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

As best practice, we therefore recommend that you disable the automatic update of apps from the App Store on all devices using the PixSell 3 application in a live environment, and that you ensure that any new release is thoroughly tested before rolling out all devices by processing example transactions that conform to your most common workflows.

For example, upgrade a single device and process a transaction that applies:

- Line and order discounts
- Promotions
- Multi-language/currency variants
- Planned re-orders, Credits, or In-store counts

4 CONTACTING ASPIN MANAGEMENT SYSTEMS
