1 UPDATES

1.1 Display only out-of-stock or unavailable products

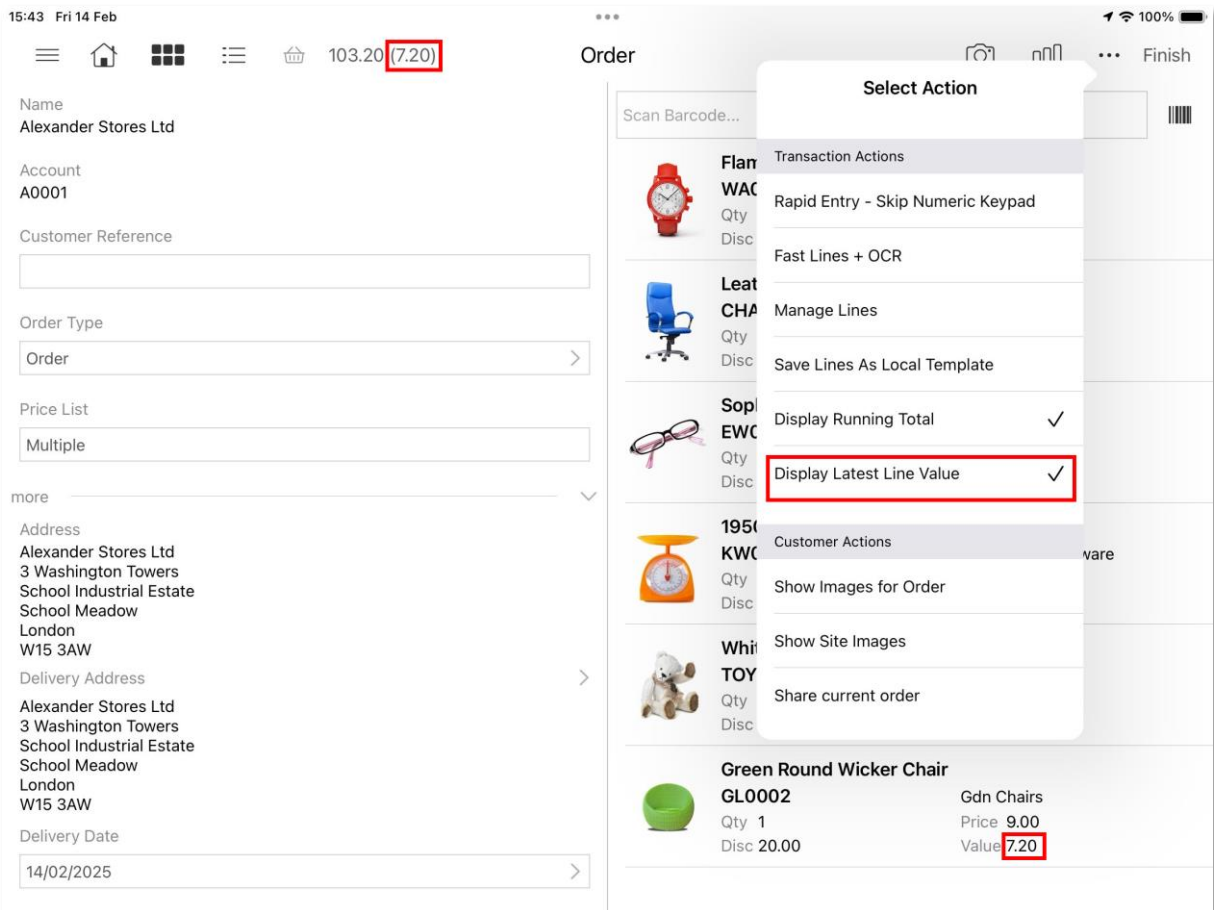

Depending on your configuration, your Catalogue's action menu will currently include an option to either view in-stock or available (in-stock and not discontinued) products only. A new option has been added so you can now also view out-of-stock or unavailable (out-of-stock and discontinued) products only.

Description	Comment
Type	New feature
Other data	No additional data required
Deployment	This is available to everyone

1.2 Display the latest line value next to the running total of an order

If you have previously ticked the 'Display Running Total' option in the order screen's action menu (which shows the running total of an order at the top of the order and catalogue screens), you will see a new 'Display Latest Line Value' option. Ticking this will show the value of the most recent line added to the order, in brackets, next to the running total of the order.

Type	New feature
Other data	No additional data required
Deployment	This is available to everyone

1.3 Other Improvements

- The Customer Activities panel now shows the last 2 years of activities by default. This can be restricted further using the filter as before if needed.
- We have greatly improved the performance of the Dashboard's Transaction Report.

1.4 Bug Fixes

- When tagging a lot of products in the Catalogue, the iPad could run out of memory, causing crashes. This has been addressed, so that you can now tag an unlimited number of products.
- We have refactored the way swipe to delete works so that the option being deleted is NOT deleted until the user confirms on the alert to do so. Before the item would disappear even if the user cancelled on the alert. The change has been done in the calendar's list of activities, in the company selection view, and in the customer advanced filters.
- Deleting 'Saved Advanced Filters' from the Advanced Filters menu made the 'Manage Advanced Filters' option disappear from the menu until the menu was closed and reopened. This has been corrected.
- The display of forms has been overhauled to prevent a rare issue which meant an open form from the Forms module could display as a pop-up form in the Customer screen.
- For customers using the default built-in (not customised) CSV and PDF documents, the Nett Price could sometimes be incorrect on CSVs, and the Line Value could be incorrect on PDFs. This happened when discounts were not taken into account. This has now been fixed.

2 UPDATE HISTORY

Summary of features and changes included in recent PixSell 3 releases:

Version	Release date	Summary
3.46, 3.47, 3.48, 3.49	December 2024	-Transactions Report in the Territory Dashboard -Delivery Address Filtering for Customer Order History -Bug Fixes

3 BEFORE YOU UPGRADE

3.1 Why upgrade?

Keeping PixSell up-to-date is crucial for several reasons:

- Our updates often include important security patches that protect against new vulnerabilities and threats. By staying current, the risk of malware, hacking, or data breaches is reduced.
- PixSell updates typically introduce new features, improvements, and bug fixes that enhance usability and performance. Outdated versions of PixSell may experience compatibility issues with newer operating systems or devices, leading to crashes or malfunctions.
- Our developers frequently optimise apps for speed and efficiency through updates, ensuring a smoother and more enjoyable user experience.

Therefore, regularly updating mobile apps is essential for maintaining security, functionality, and overall user satisfaction.

3.2 Supported devices

At present, in order to receive updates for PixSell 3, the user devices must be on iOS 15.5 or above.

In the future we plan to move this to iOS 16.0. In doing so, any user on an iPad Air 2 or iPad Mini 4 will continue to be able to use PixSell but will cease to receive updates.

3.3 Testing advice for PixSell administrators

Whilst we make every effort to thoroughly test each new release, there is always scope that upgrading without testing may have an adverse impact on your particular business processes. Our advice is therefore that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

As best practice, we therefore recommend that you disable the automatic update of apps from the App Store on all devices using the PixSell 3 application in a live environment, and that you ensure that any new release is thoroughly tested before rolling out all devices by processing example transactions that conform to your most common workflows.

For example, upgrade a single device and process a transaction that applies:

- Line and order discounts
- Promotions
- Multi-language/currency variants
- Planned re-orders, Credits, or In-store counts
