1 UPDATES

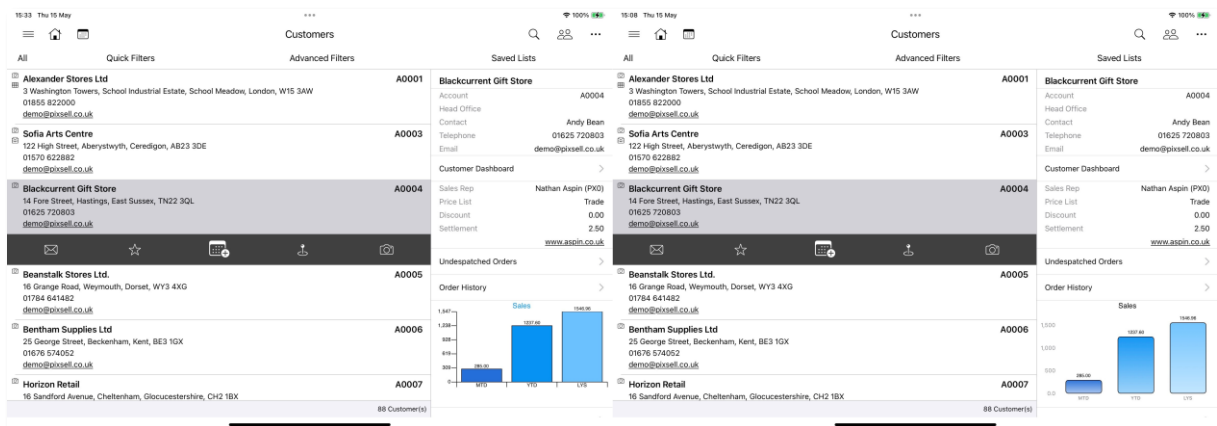

1.1 Charts re-design

We've re-designed all charts so they have a new sleeker look. This applies to charts for Sales Intelligence reports as shown in the first screenshot below, and also to charts available to everyone like in the customer details panel as shown in the second screenshot below.

BEFORE:

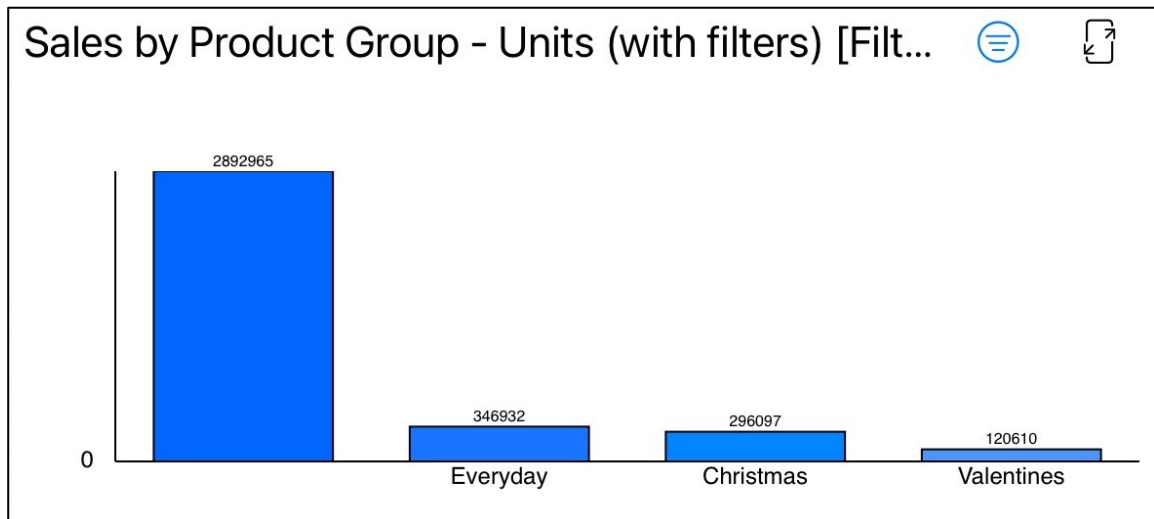

AFTER:

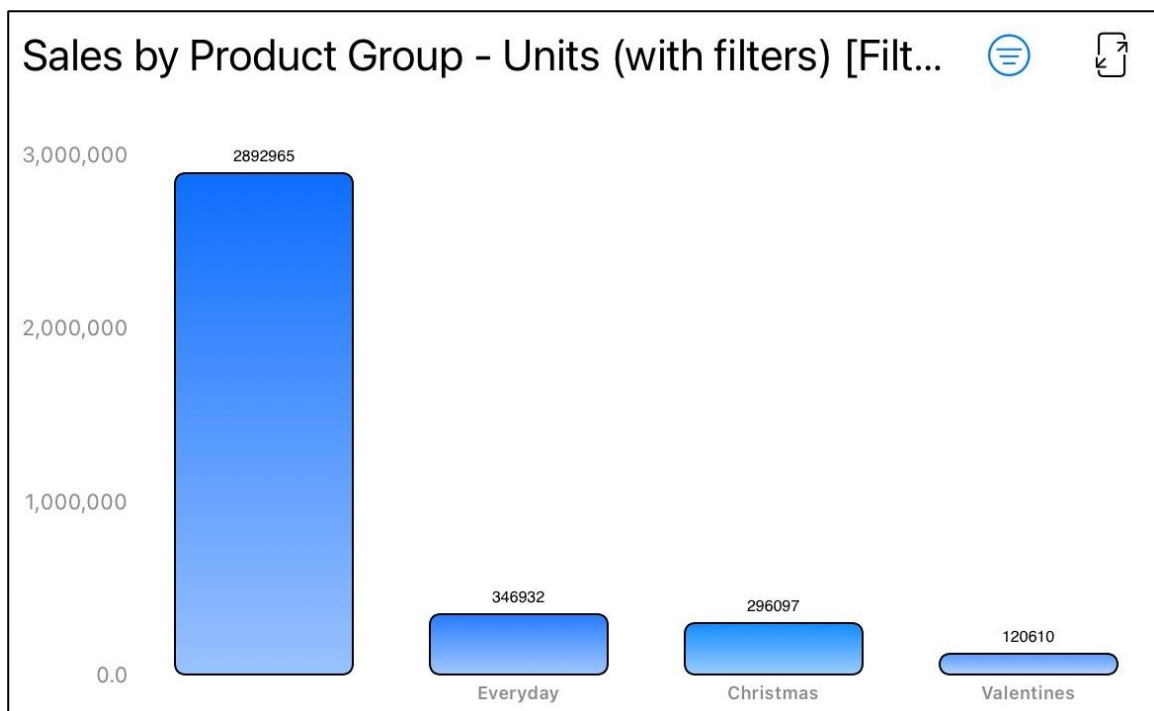

Here is a closer look at what has changed by chart type:

- Bar charts now have rounded corners, show a gradient of colours, and have a more consistent Y axis.

BEFORE:

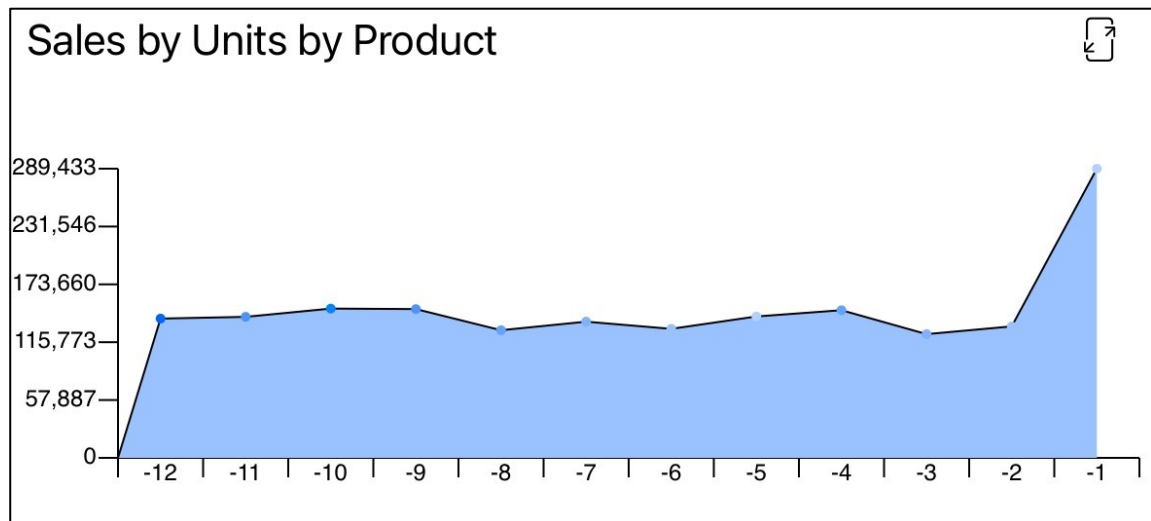

AFTER:

- Line charts have curved lines between points, show a gradient of colours, have a Y axis with rounded figures, show a background grid to more easily read values, and show the point of origin as the first point rather than always showing the origin at 0 which is not a real data point.

BEFORE:

AFTER:

- Pie charts are now in a doughnut shape, and when tapping on a segment it will pop out and display its label in the middle. The system will also automatically assign different colours so each segment can more easily be identified, and a legend at the bottom will show what each colour represents. This also avoids overcrowding the chart itself with labels that could sometimes overlap each other.

BEFORE:

AFTER:

1.2 Other Improvements

- If the app is closed during a very large order and then reopened, it will reload with an “Opening Order” splash screen showing a percentage progress wheel, so users can see what’s happening and do not think the app is frozen.

1.3 Bug Fixes

- Removed the ‘Request Catalogue PDF’ option from the Out Tray menu for irrelevant transaction types like forms.
- On iPhone only, tapping a customer’s email address would not initiate a new email.
- When ordering products in Vertical Scrolling view, the screen could move slightly, meaning the user’s finger could miss the ‘+’ button if wanting to tap it a second time. Now the screen will only move if the product is not completely in view.
- Ensured the catalogue filtering now happens as soon as an account is selected.
- Fixed an issue where some product images formatted in a specific way could sometimes not display.
- When adding a new order line, the Delete button above the keypad was available to be tapped, but had no purpose. It has now been greyed out.
- Stability improvements.

2 UPDATE HISTORY

Summary of features and changes included in recent PixSell 3 releases:

Version	Release date	Summary
3.51, 3.52	April 2025	<ul style="list-style-type: none"> -Ability to sort transactions by product code -Record contact information on activities -Copy and paste undetected or invalid product codes from Fast Lines -Details about outstanding items in the Customer Order History report -Other Improvements -Bug Fixes

3 BEFORE YOU UPGRADE

3.1 Why upgrade?

Keeping PixSell up-to-date is crucial for several reasons:

- Our updates often include important security patches that protect against new vulnerabilities and threats. By staying current, the risk of malware, hacking, or data breaches is reduced.
- PixSell updates typically introduce new features, improvements, and bug fixes that enhance usability and performance. Outdated versions of PixSell may experience compatibility issues with newer operating systems or devices, leading to crashes or malfunctions.
- Our developers frequently optimise apps for speed and efficiency through updates, ensuring a smoother and more enjoyable user experience.

Therefore, regularly updating mobile apps is essential for maintaining security, functionality, and overall user satisfaction.

3.2 Supported devices

PixSell 3 now requires iOS 17 or above. This allows us to take advantage of the latest features and security enhancements, ensuring a smoother and more reliable experience. If your device does not support iOS 17, you will still be able to use older releases of PixSell 3 (up to version 3.50), but newer updates and features won't be available.

3.3 Testing advice for PixSell 3 administrators

Whilst we make every effort to thoroughly test each new release, there is always a possibility that upgrading without testing may have an adverse impact on your particular business processes. Our advice is therefore that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

As best practice, we therefore recommend that you disable the automatic update of apps from the App Store on all devices using the PixSell 3 application in a live environment, and that you ensure that any new release is thoroughly tested before rolling out all devices by processing example transactions that conform to your most common workflows.

For example, upgrade a single device and process a transaction that applies:

- Line and order discounts
- Promotions
- Multi-language/currency variants
- Planned re-orders, Credits, or In-store counts

4 CONTACTING ASPIN MANAGEMENT SYSTEMS

If you have any queries, or require any further information, please contact us using the following details:

- For United Kingdom general and sales information, email sales@aspin.co.uk or call **+44 (0)1794 500 200**
- For United Kingdom technical information and support, email our Service Desk at support@aspin.co.uk or call **+44 (0)1794 500 205**
- For all Australia and New Zealand queries, email info@aspin.com.au or call **+61 (0)7 3297 7425**
