1 UPDATES

1.1 Changes to presentation screen slideshows

Each slide in a presentation screen slideshow can now direct to a different part of the catalogue, so each image can show products specific to it. For example, if you have lifestyle images relating to different types of furniture (dining room furniture, bedroom furniture, etc), rather than all images linking to all products in the furniture category, you can make each image go to the specific type of furniture it refers to when you press the button at the bottom right of the screen. Configuring this requires a new version of the Image Manager program used to design your presentation screen, so please give our Service Desk a call if you want to make use of this new feature.

Description	Comment
Type	New Feature
Other data	No new data required
Deployment	This is available to everyone but requires upgrading the Image Manager program to a new version that allows to configure a target for each image

1.2 Show customer-specific data against pantry list products in all catalogue views

Customer-specific data shown against products in the pantry list can now be shown in all catalogue views, rather than just when viewing the pantry list itself from the Collections menu. In the example below, for products previously ordered by the currently selected customer (showing a blue chain icon), we're showing the quantities previously ordered by the customer, as well as the total of ordered quantities for the current year and last year. This is showing in the general catalogue even though we're not viewing the pantry list itself.

Description	Comment
Type	New Feature
Other data	This requires order history data
Deployment	This requires configuration changes

1.3 Other Improvements

- The design of the maps shown in the customer details panel has been improved, and it now contains a button in the bottom right corner to reset to the initial view if you've moved it or zoomed in/out.

1.4 Bug Fixes

- The keyboard was not automatically dismissing when closing a search in the Also Bought or Linked products screens.
- The Also Bought option when tapping on a blue chain icon was not always showing first time.

2 UPDATE HISTORY

Summary of features and changes included in recent PixSell 3 releases:

Version	Release date	Summary
3.57	October 2025	-Copy To Clipboard (For Fast Lines) -Other Improvements -Bug Fixes

3.42	September 2024	-Delivery date on simultaneous order tabs -Held orders warning -Valuation for Plan Re-Orders -Other Improvements -Bug Fixes

3 BEFORE YOU UPGRADE

3.1 Why upgrade?

Keeping PixSell up-to-date is crucial for several reasons:

- Our updates often include important security patches that protect against new vulnerabilities and threats. By staying current, the risk of malware, hacking, or data breaches is reduced.
- PixSell updates typically introduce new features, improvements, and bug fixes that enhance usability and performance. Outdated versions of PixSell may experience compatibility issues with newer operating systems or devices, leading to crashes or malfunctions.
- Our developers frequently optimise apps for speed and efficiency through updates, ensuring a smoother and more enjoyable user experience.

Therefore, regularly updating mobile apps is essential for maintaining security, functionality, and overall user satisfaction.

3.2 Supported devices

PixSell 3 now requires iOS 17 or above. This allows us to take advantage of the latest features and security enhancements, ensuring a smoother and more reliable experience. If your device does not support iOS 17, you will still be able to use older releases of PixSell 3 (up to version 3.50), but newer updates and features won't be available.

3.3 Testing advice for PixSell 3 administrators

Whilst we make every effort to thoroughly test each new release, there is always a possibility that upgrading without testing may have an adverse impact on your particular business processes. Our advice is therefore that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

As best practice, we therefore recommend that you disable the automatic update of apps from the App Store on all devices using the PixSell 3 application in a live environment, and that you ensure that any new release is thoroughly tested before rolling out all devices by processing example transactions that conform to your most common workflows.

For example, upgrade a single device and process a transaction that applies:

- Line and order discounts
- Promotions
- Multi-language/currency variants
- Planned re-orders, Credits, or In-store counts

4 CONTACTING ASPIN MANAGEMENT SYSTEMS

If you have any queries, or require any further information, please contact us using the following details:
