1 UPDATES

1.1 Catalogue filtering by Active / Discontinued products

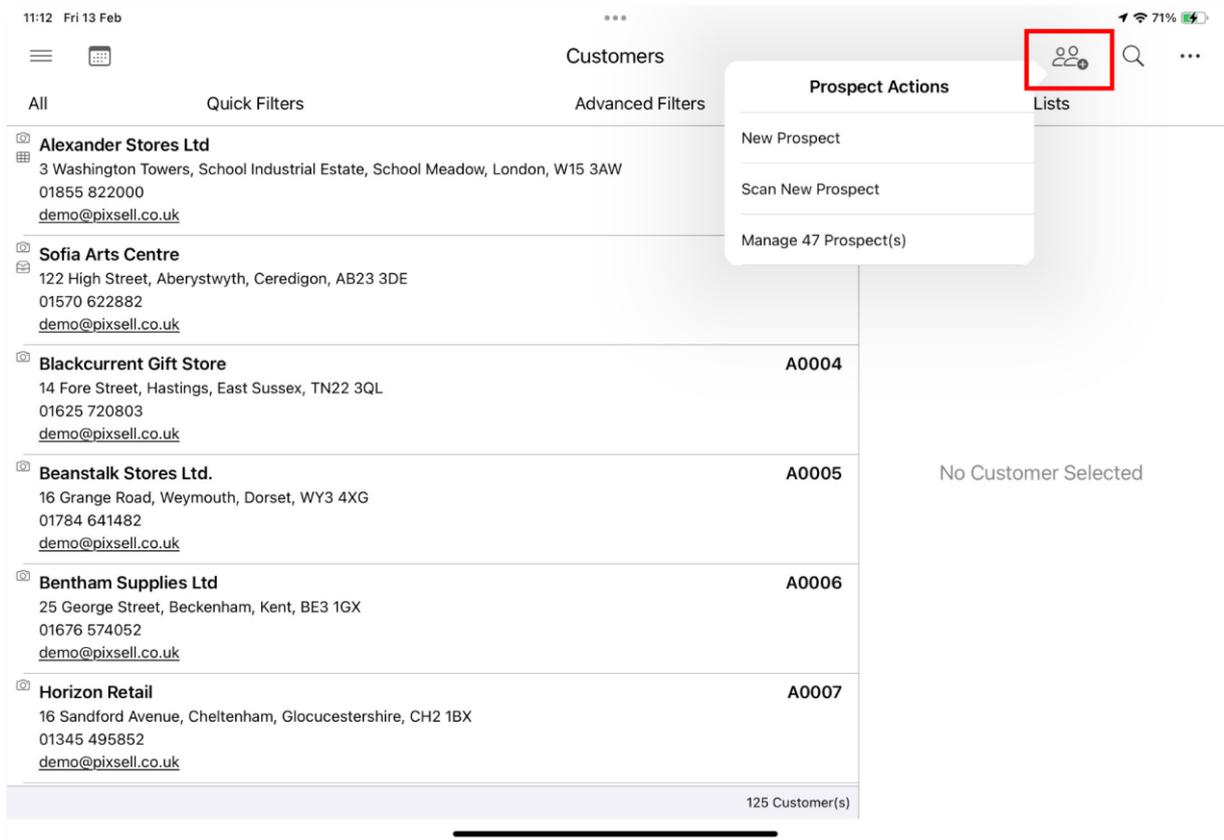

In the same way you could filter the catalogue by In Stock / Out Of Stock products (or Available / Unavailable products depending on your configuration), you can now also filter it by Active / Discontinued products. Simply tap the 3-dot action menu in the top right corner of the screen and go to the Filter Options to access these new filters. Once turned on, they can be tapped again to be turned off.

Description	Comment
Type	New Feature
Other data	No new data required
Deployment	This is available to everyone

1.2 Prospects button on Customers screen

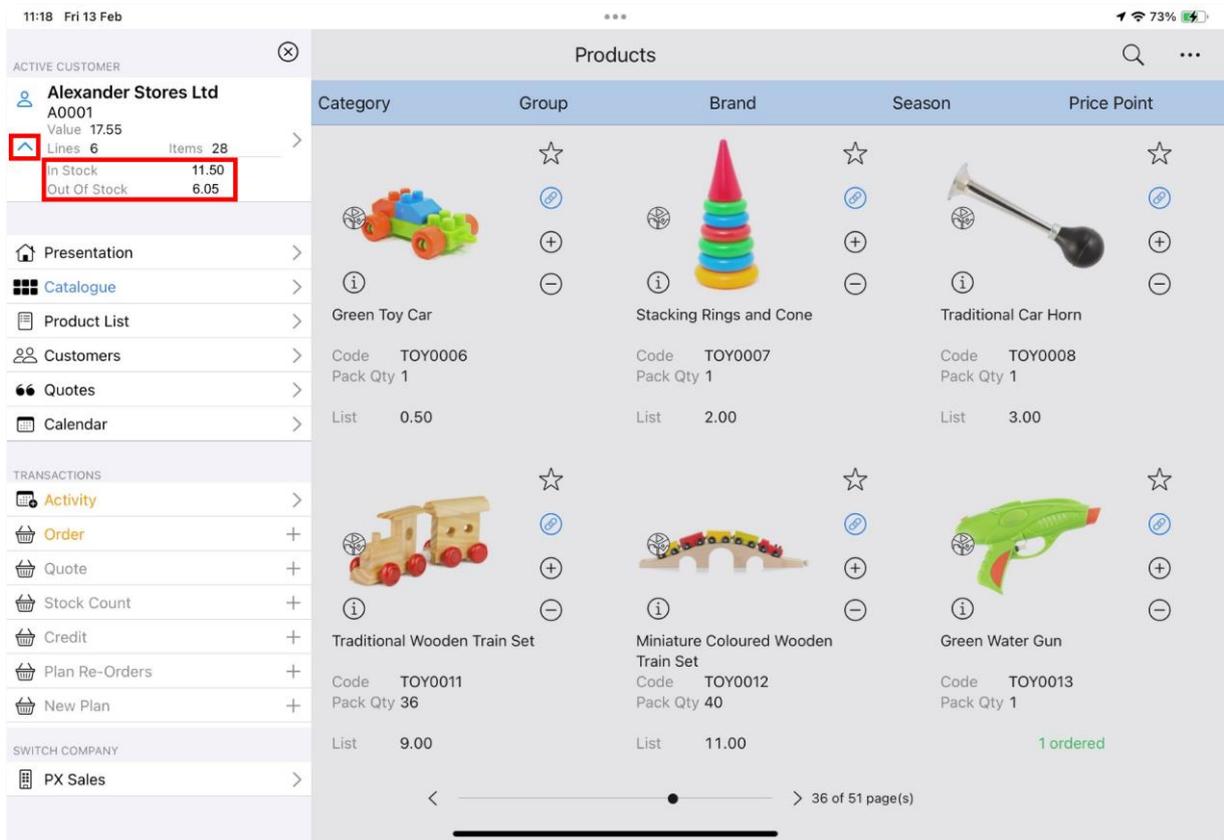

The Prospects button on the Customers screen has been reinstated with a new icon. The Prospect Actions are also still available in the 3-dot action menu.

Description	Comment
Type	Improvement
Other data	No new data required
Deployment	This is available to everyone

1.3 'In Stock' and 'Out Of Stock' order values in the Main Menu's order summary

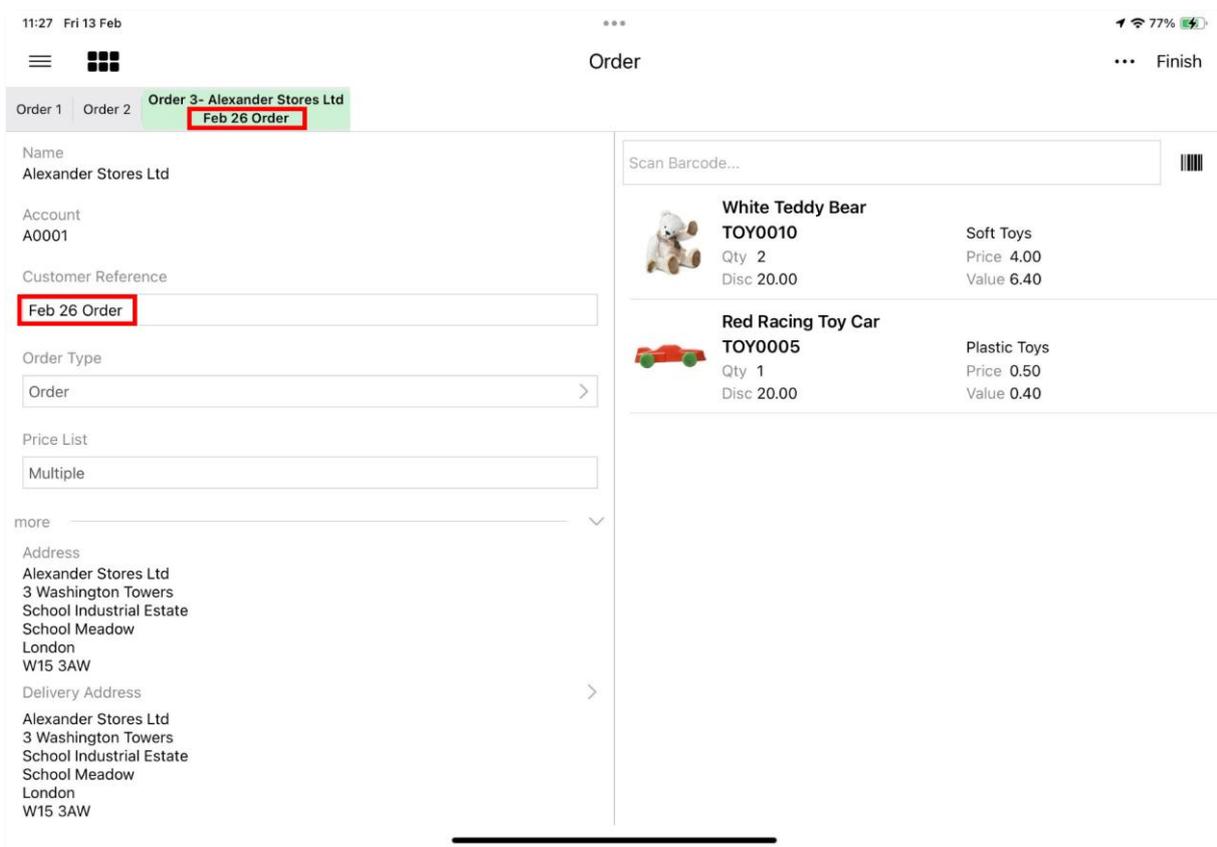

The order summary in the Main Menu now displays the order value by 'In Stock' and 'Out Of Stock' status, in addition to the total order value. The blue chevron allows for these additional values to be shown or hidden.

Description	Comment
Type	New Feature
Other data	No new data required
Deployment	This is available to everyone

1.4 Display the customer's order references in concurrent order tabs

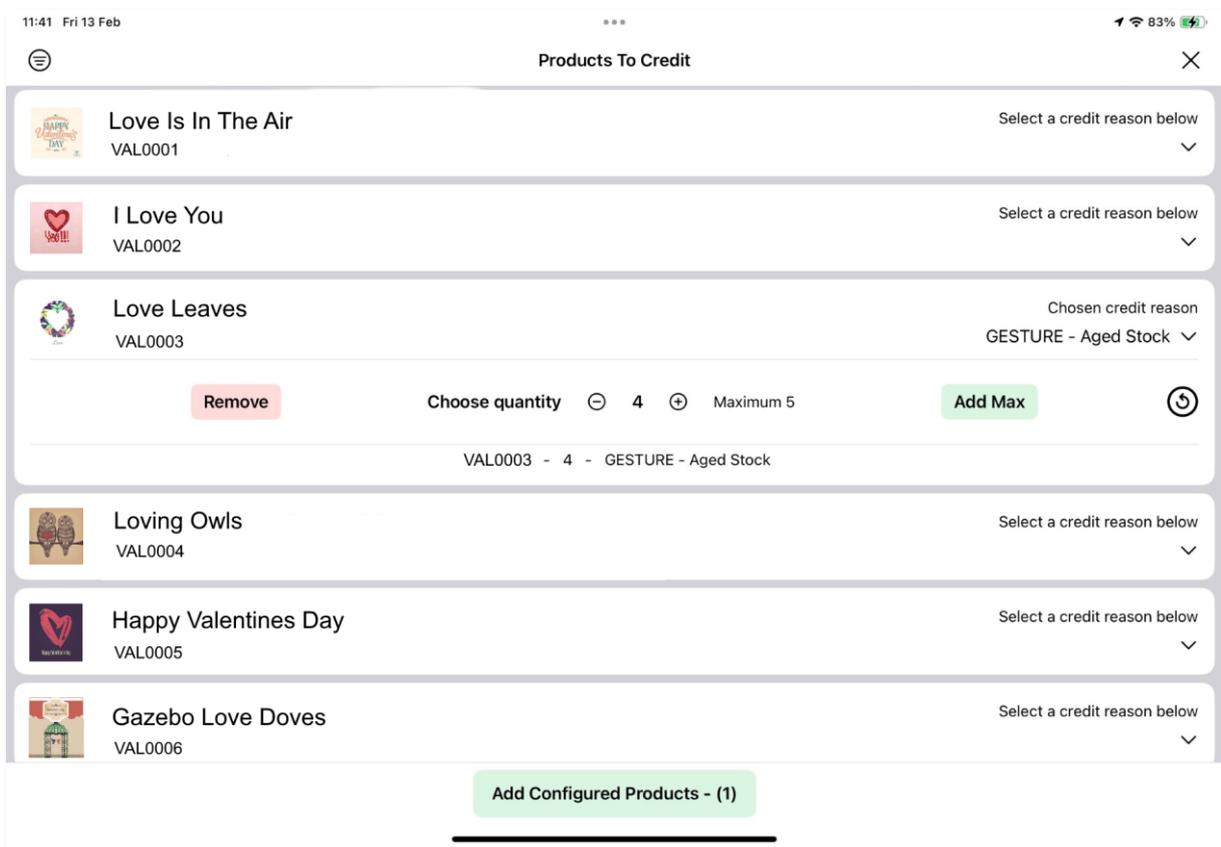

When doing concurrent orders, the customer's order references can be shown on the order tabs to help differentiate them. As the text on the tab changes in real time as you type into the Customer Reference field, you could also type a temporary reference that makes sense to you as you build the order (for instance "Xmas Top Up"), before putting in the actual customer's reference as you finish the order. It is also still possible to show delivery address details (such as the name or first line of the address) or the delivery date on the tabs as before. If you are interested in this, please contact our Service Desk so they can turn this on for you.

Description	Comment
Type	New Feature
Other data	No new data required
Deployment	This would require a small change to your configuration

1.5 Add to Credit from a previous invoice

The Credit module can be enhanced with new optional functionality. It is now possible to block items from being credited from the catalogue or via scanning, and instead add products to a credit by going to the Sales History, selecting an invoice, and choosing a new 'Add to Credit' option. This would display the screen below, where you can select a credit reason for any product from the invoice, and add some products to the credit up to the maximum quantity that was on that invoice. The reasons are configurable, and can each be made eligible for a certain number of calendar days only. It is also possible to add photos to the credit and have them displayed on PDF confirmations. If you are interested in this, please contact your account manager for more information.

Description	Comment
Type	New Feature
Other data	New data would be required to define the reasons and their length of validity
Deployment	This would require chargeable configuration changes

1.6 Other Improvements

- After entering a new prospect, it is possible to configure a list of actions to select from, such as starting an order for that prospect or showing a form. When using the Activities module, these actions could not be performed in one go because you had to go and manually start an activity first. To make this process smoother, when tapping a prospect completion action that requires an activity, you will now be prompted to start a specific activity type, and PixSell will then silently create an activity in the background before taking you straight to the order or form. Forms that do not need an activity will now also work automatically.
- Long pressing the PixSell icon in the 'Tell Me More' page will prompt you to open the PixSell settings, which will be helpful as a shortcut when our Service Desk tries to help you.
- Improvement to the display of any freetypes and generics shown in the sales history, order history and undespached report.
- Improvement to the display of a product's extended attributes from the SkooCloud PIM.
- Removed the temporary tooltips and information button that were added a few months ago to guide users through the navigation bar changes.

1.7 Bug Fixes

- Corrected text in the Customers screen's advanced filters.
- Addressed an issue that meant Quick Orders bypassed any order blocking for On Hold customers.
- Fixed some intermittent issues with the Aspin ID authentication method.
- Update Forms could not be configured to automatically pop-up when starting an activity. This has now been resolved.
- When taking photos for customers, the screen could jump out of view if you had a long list of customer images slots. It will now stay where you were and show you the photo you've just added.

2 UPDATE HISTORY

Summary of features and changes included in recent PixSell 3 releases:

Version	Release date	Summary
3.59	December 2025	<ul style="list-style-type: none"> -Customer Site Images button on Activity screen -Copy an order's Tracking ID to the clipboard to paste onto courier's website -Icons for the main PixSell modules' menus -Other Improvements -Bug Fixes

3.50	February 2025	<ul style="list-style-type: none"> -Display only out-of-stock or unavailable products -Display the latest line value next to the running total of an order -Other Improvements -Bug Fixes

3 BEFORE YOU UPGRADE

3.1 Why upgrade?

Keeping PixSell up-to-date is crucial for several reasons:

- Our updates often include important security patches that protect against new vulnerabilities and threats. By staying current, the risk of malware, hacking, or data breaches is reduced.
- PixSell updates typically introduce new features, improvements, and bug fixes that enhance usability and performance. Outdated versions of PixSell may experience compatibility issues with newer operating systems or devices, leading to crashes or malfunctions.
- Our developers frequently optimise apps for speed and efficiency through updates, ensuring a smoother and more enjoyable user experience.

Therefore, regularly updating mobile apps is essential for maintaining security, functionality, and overall user satisfaction.

3.2 Supported devices

PixSell 3 now requires iOS 17 or above. This allows us to take advantage of the latest features and security enhancements, ensuring a smoother and more reliable experience. If your device does not support iOS 17, you will still be able to use older releases of PixSell 3 (up to version 3.50), but newer updates and features won't be available.

3.3 Testing advice for PixSell 3 administrators

Whilst we make every effort to thoroughly test each new release, there is always a possibility that upgrading without testing may have an adverse impact on your particular business processes. Our advice is therefore that you review this version before instructing users to upgrade. This will ensure minimal interruption to your PixSell 3 services.

As best practice, we therefore recommend that you disable the automatic update of apps from the App Store on all devices using the PixSell 3 application in a live environment, and that you ensure that any new release is thoroughly tested before rolling out all devices by processing example transactions that conform to your most common workflows.

For example, upgrade a single device and process a transaction that applies:

- Line and order discounts
- Promotions
- Multi-language/currency variants
- Planned re-orders, Credits, or In-store counts

4 CONTACTING ASPIN MANAGEMENT SYSTEMS

If you have any queries, or require any further information, please contact us using the following details:

- For United Kingdom general and sales information, email sales@aspin.co.uk or call **+44 (0)1794 500 200**
- For United Kingdom technical information and support, email our Service Desk at support@aspin.co.uk or call **+44 (0)1794 500 205**
- For all Australia and New Zealand queries, email info@aspin.com.au or call **+61 (0)7 3297 7425**
