UPGRADES

NEW Unit of measure ordering

What's changed

- PixSell now supports products sold in different units of measure, such as inner and outer cases
- Pricing is applied according to the selected unit, including support for quantity-based pricing
- The same product can be added in different units on the same order, with each unit shown as a separate order line
- The selected unit is retained when an order is saved, reopened or amended
- Unit information is carried through when the order is sent, allowing downstream systems to process the appropriate packaging and fulfilment requirements

How it helps

Reps can order products in the way customers actually buy them, while PixSell applies the appropriate pricing and carries the selected unit through the order process.

Requirements	Additional data (including new pricing records) required
Access	Requires chargeable configuration, speak to your account manager for details

BUG FIXES

- General performance and stability improvements including the following:
  - **Customer search:** Fixed an issue where the cursor could unexpectedly jump backwards while typing in the customer search field
  - **Adding search results to an order:** Fixed an issue that could cause PixSell to freeze when using Add Current View to Order while the magnifying glass search was still active
  - **Activity duration:** Improved activity duration calculations when activities are closed and reopened or when the device changes time zone
  - **Activity notes:** We've addressed an issue that could cause activity notes to be duplicated against another customer when a previously synced activity was reopened; completed activities can no longer be reopened once they have synced to the back office
  - **Customer forms:** Fixed an issue where customer forms could sometimes fail to open while a customer search was active
  - Other minor fixes and improvements

UPGRADE GUIDANCE

Before you Upgrade

We recommend testing each release on a single device to confirm it works with your workflows before rolling it out across your team. This helps avoid disruption and ensures a smooth upgrade.

PixSell 3 now requires iOS 17 or above, so check device compatibility before upgrading.

Full upgrade guidance can be found at aspin.co.uk/pixsell-upgrade-guidance.

CONTACTING ASPIN

If you have any queries, or require any further information, please contact us using the following details:

- For United Kingdom general and sales information, email sales@aspin.co.uk or call +44 (0)1794 500 200
- For United Kingdom technical information and support, email our Service Desk at support@aspin.co.uk or call +44 (0)1794 500 205
- For all Australia and New Zealand queries, email info@aspin.com.au or call +61 (0)7 3297 7425
